

CALFWAY 16

PRODUCT DESCRIPTION

Calfway 16 pellets are scientifically formulated from energy rich cereal grains, quality proteins, minerals and vitamins. Bovatec® is included, offering continuous protection against coccidiosis, but also for the added benefit that it helps the calf get more energy from the feed as the rumen matures. These pellets are ideally suited to supplement older calves once they have access to pasture, ensuring target growth rates continue to be achieved. The nutrients are balanced to ensure the calf continues to grow and develop to its maximum potential for an optimal productive and healthy life.

FEEDING GUIDELINES

Offer Calfway 16 Pellets ad-lib once calves have access to quality pasture.

Keep feed fresh, and ensure that feeding containers are kept clean.

Calves should always have access to a quality roughage such as straw or stalky hay.

Ensure that calves have access to fresh clean water at all times.

It is advisable to feed Calfway 16 Pellets for a further 4 weeks once weaned and on pasture to prevent growth checks in this transition to a pasture-based diet. Feed ad-lib until target weights are reached.

ADDITIVES AVAILABLE

- **Levucell® SC:** A probiotic rumen specific live yeast which promotes favourable rumen bacteria to stimulate rumen papillae development, leading to better feed utilisation and growth.
- **Xtract®:** Consists of aromatic plant and spice extracts from oregano, cinnamon and capsicum shown to have physiological actions along the gastro intestinal tract including enzyme secretion and gut lining protection, thereby maintaining gut microflora equilibrium. This improves calf vitality and health.
- **Agrimos®:** A pre-biotic yeast extract that provides a favourable environment for the development of beneficial bacteria thereby preventing digestive disorders, improving feed utilisation and calf growth.

Calf

NUTRITIONAL INFORMATION

Nutrient	Typical Dry Matter Analysis*
ME	12.0 MJ/kg
Crude Protein	16%

**Analysis may vary slightly due to grain variances beyond our control.*

INGREDIENTS SELECTED FROM

CALFWAY 16

DIRECTIONS FOR USE

For improved liveweight gain and as an aid in the control of coccidiosis caused by Eimeria species. Calves are protected from coccidiosis when consuming the following amounts (g/calf/day), depending on bodyweight (kg).

Bodyweight (kg/calf)	Feed intake (g/calf/day)
40	450
50	550
60	675
70	800
80	900
90	1000

STORAGE

Store in a cool dry place and out of reach of vermin or any other animals.

CAUTION

Do not allow dogs, horses or other equines or camelids access to feeds containing Bovatec®. Ingestion of Bovatec® by dogs, horses or other equines and camelids has been fatal.

Do not feed to species other than those stipulated on the label.

CONTRAINDICATIONS

Care must be exercised when feeding concurrently with other antimicrobials. Do not feed with other ionophores e.g. monensin capsules, liquid or premix. Do not exceed recommended dose rates. Not to be used for single dose treatment. Do not allow dogs, horses (or other equids), alpacas (or other camelids) access to feeds containing Bovatec®, as ingestion by these species may be fatal.

FOR ANIMAL TREATMENT ONLY

Calf Feed with Bovatec® 20CC, ACVM Registration Number A009679.

Contains 90mg/kg Lasalocid (as 450mg/kg Bovatec® 20CC A009679).

Bovatec® is registered pursuant to the ACVM Act 1997, No. A009679.

See www.foodsafety.govt.nz for registration conditions.

Bovatec® is a registered trademark.
