

DENVER GOLD DELUXE PELLETS

PRODUCT DESCRIPTION

Denver Gold Deluxe is the perfect formulation to be fed through early lactation with other forages when the typical dairy cow suffers significant condition loss and is calling out for a concentrated energy source. With the inclusion of the bypass fats this aids the energy intake without compromising rumen capacity.

Denver Gold Deluxe has been found to give a quicker turn to positive energy balances post calving, encouraging better cycling, and in turn better conception rates. Providing additional concentrated energy through Denver Gold Deluxe helps to set your cow's condition up for a more productive season.

The high quality mineral inclusion will also help to counter mineral imbalances that may occur.

FEEDING GUIDELINES

Typical feed rates 2-4 kg per head a day. Introduce Denver Gold Deluxe gradually to allow digestive systems to adjust to the higher starch intake.

Mineral inclusion has been formulated to accommodate 2 kg/head/day.

Animals should always have access to a quality fibre such as hay, chaff, pasture or silage to maintain a healthy digestive system.

Fresh clean water must be available at all times.

Must be fed in a controlled manner.

ADDITIVES AVAILABLE

Custom formulations available upon request

- Rumensin®
- Bovatec®
- Toxin Binders
- NutriPlex Organic Trace Minerals
- Zinc Oxide

SUGGESTED FEEDING PERIODS

Suggested feeding period indicated in orange.

The suggested feeding period is an indication for a spring calving herd and must be interpreted in relation to professional advice.

Dairy

NUTRITIONAL INFORMATION

Nutrient	Typical Dry Matter Analysis*
ME	13 MJ/kg
Protein	11.5%

**Analysis may vary slightly due to grain variances beyond our control.*
