

# DENVER GOLD PELLETS

## PRODUCT DESCRIPTION

Denver Gold is the most popular of the Denver Stock Feeds range. A grain based formulation boasting quality energy sources and a balanced mineral inclusion. Professionally formulated supplement for cows when on pasture and other forages throughout lactation. With Denver Gold's quality mineral inclusion you will reduce the risk of potential metabolic issues experienced on the farm.

The high starch component of the feed through the high grain inclusion will help increase the protein composition in the milk for maximum return on your milk yield. With the inclusion of molasses and other sweeteners this diet will be the tasty feed your cows are calling for.

## FEEDING GUIDELINES

Typical feed rates 2-4 kg per head a day. Introduce Denver Gold pellets gradually to allow digestive systems to adjust to the higher starch intake.

Mineral inclusion has been formulated to accommodate 2 kg/head/day.

Animals should always have access to a quality fibre such as hay, chaff, pasture or silage to maintain a healthy digestive system.

Fresh clean water must be available at all times.

Must be fed in a controlled manner.

## ADDITIVES AVAILABLE

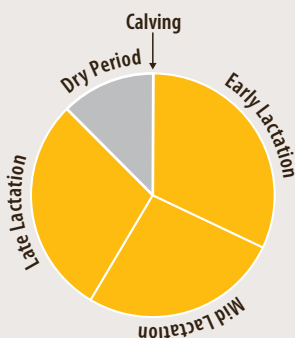

Custom formulations available upon request

- Rumensin®
- Bovatec®
- Toxin Binders
- NutriPlex Organic Trace Minerals
- Zinc Oxide

## SUGGESTED FEEDING PERIODS

Suggested feeding period indicated in yellow.
