

DENVER MAINTAIN PELLETS

PRODUCT DESCRIPTION

Denver Maintain is a low cost supplement to be fed to cows on pasture and other forages. The inclusion of lime, magnesium, and salt acts as a source of minerals to help reduce the risk of health issues including milk fever. With the inclusion of molasses, Denver Maintain will be all the more sweet for your herd.

FEEDING GUIDELINES

Typical feed rates 2-4 kg per head a day. Introduce Denver Maintain gradually to allow digestive systems to adjust to the higher starch intake.

Mineral inclusion has been formulated to accommodate 2 kg/head/day.

Animals should always have access to a quality fibre such as hay, chaff, pasture or silage to maintain a healthy digestive system.

Fresh clean water must be available at all times.

Must be fed in a controlled manner.

ADDITIVES AVAILABLE

Custom formulations available upon request

- Rumensin®
- Bovatec®
- Toxin Binders
- NutriPlex Organic Trace Minerals
- Zinc Oxide

SUGGESTED FEEDING PERIODS

Suggested feeding period indicated in purple.

The suggested feeding period is an indication for a spring calving herd and must be interpreted in relation to professional advice.

Dairy

NUTRITIONAL INFORMATION

Nutrient	Typical Dry Matter Analysis*
ME	10.5 MJ/kg
